Premium Water Filtration

The Continuum premium water system is ideal for whole house softening and conditioning. It allows for continuous removal of common household contaminants, giving your family constant soft, silky water without hardness and chlorine.

Powered by NSF approved reticulated medias, this premium whole house softening and conditioning system gives you benefits far beyond traditional water treatment.

- Chlorine and chloramine free water
- Constant soft, silky, hardness-free water
- Bacteria, heavy metals, and algae free water

System Capacities

Recommended PSI usage is 80 psi. Intended for residential use only. *Lifetime warranty excludes medias.*
Water The Way Nature Intended

The Contiuum utilizes the Clack twin metered control valve efficiently reducing waste water by 30% for reliable pure water.

Benefits of Reticulated Media
- Greater surface area, more effective than granular media
- Less backwashing preventing less waste water
- Reduces pressure drop up to 50%
- Prevents channeling and plugging versus granular media
- Improves efficacy and efficiency
- Creates greater contact time
- NSF/ANSI approved

Reticulated KDF 55 Media Cubes
Designed for removing and reducing chlorine, bacteria, and soluble heavy metals. This media also helps control scale and algae, even in hot water applications, without the issues of packing and channeling like common granular KDF.

*KDF 85 is available by special request

SNRF-CC Modified Catalytic Carbon
A modified catalytic carbon that has the ability to absorb the entire chloramine molecule at once, without the need to break the ammonia/chlorine bond first, while also reducing soluble bond first. This creates a higher capacity and greater flow rate than traditional catalytics.

10% Crosslink Resin
This resin has more intersections or strands “crosslinking” holding the beads together better than standard 8% resin. This allows the resin bead to have greater strength and therefore a longer lifespan, sometimes double, than that of standard resin, especially when softening chlorinated water.

Typically Sized As:
- 2-4 People - Reveal 1 Cuft
- 3-6 People - Reveal 1.5 Cuft
- 5+ People - Reveal 2 Cuft

Typical sizing will depend on hardness of water.
